Biological Processes

cell-cell adhesion hematopoietic or lymphoid organ development

immune system development

positive regulation of cell differentiation negative regulation of developmental process

negative regulation of programmed cell death growth number of genes tube morphogenesis 160 200 regulation of anatomical structure morphogenesis negative regulation of apoptotic process 240 positive regulation of cell population proliferation 280 regulation of cell motility response to organic cyclic compound p.adjust regulation of cell migration 0.0001165 0.0001160 0.0001155 positive regulation of intracellular signal transduction 0.0001150 regulation of transferase activity

positive regulation of transport

defense response to other organism response to cytokine

regulation of response-to external stimulus
